

Yashansh Rastogi

Software Engineer

yashanshrastogi@gmail.com · [Linkedin](#) · [GitHub](#) · [Portfolio](#)

SUMMARY

B.Tech Computer Science student with hands-on full-stack development experience and a strong foundation in Data Structures & Algorithms, practiced in C++ with consistent problem-solving across arrays, trees, graphs, and dynamic programming. Focused on building scalable, production-ready software that solves real problems, not just prototypes. Specialized in integrating AI capabilities and cloud technologies into functional systems, ranging from LLM-powered geolocation platforms and AI-driven career tools to offline voice interfaces with local model integration deployed on Google Cloud. Actively strengthening backend engineering and system design skills while building projects that ship.

EXPERIENCE

ByteEdu · *Frontend Developer Intern*

2024 - 2025 | Remote

- Engineered and maintained a library of reusable React.js components, optimizing rendering performance through efficient state management and component architecture — directly enhancing UI/UX consistency and responsiveness across critical user flows.
- Integrated RESTful APIs to power real-time dynamic data rendering, architecting seamless frontend-backend communication pipelines that reduced data latency and significantly improved overall application responsiveness and user experience.

EDUCATION

KCC Institute of Technology & Management

2023 – 2027 | Greater Noida

B.Tech in Computer Science & IT

SKILLS

C++ · Python · JavaScript · React.js · Node.js · Next.js · Django · FastAPI · RESTful APIs · TensorFlow · LangChain · scikit-learn · SQL

PROJECTS

CityWallet – *AI-Powered Geolocation-Based Offer Delivery Platform*

- Built a hyper-personalized discount delivery platform using Next.js 14, Django, and FastAPI microservices, integrating Groq LLM for intelligent offer matching based on user location, weather, and calendar context.
- Implemented real-time event streaming via Google Cloud Pub/Sub and Redis, with Google OAuth (NextAuth 5) for secure, scalable authentication.

Nexora – *Offline Voice-Controlled OS Interface with Local LLM Integration*

- Built a voice-controlled OS interface enabling real-time automation of 40+ system commands via speech and text inputs using Python and Ollama (local LLM).
- Integrated offline STT & TTS pipelines with multi-threaded architecture, achieving low-latency, privacy-first performance.

EduPath – *AI-Powered Career Acceleration Platform for Developers*

- Developed a full-stack developer career platform using Next.js 16 and React 19, featuring AI mentoring, personalized learning roadmaps, and in-browser coding skill verification via Monaco Editor.
- Integrated Groq/OpenRouter LLM APIs with Prisma (PostgreSQL) for intelligent guidance and data persistence; deployed on Vercel with resume export via html2canvas/jsPDF.

AWARDS

Agentic Premier League – Champion · *Google Cloud*

2026

Won Google Cloud's competitive AI hackathon by building and deploying real-time applications (Live IPL Scoreboard & Finance Assistant) under time constraints.

AI Rocket Badge · *Microsoft Learn*

2024

Ranked Top 15/300 in a Microsoft-led AI program, demonstrating proficiency in machine learning solution development.
